Find your folder (you will find it in c:\Program Files\Autodesk\AutoCAD\R2018\Default\Configuration) There is a folder named "inpuntutemp" in here. Find the file named db.ini in this folder, and rename it to your own name like db.ini Open this file, and find the following line: [KEY] BEGIN { version = "1.0"; } BEGIN the line. Go to the end of the line, add the following lines, and press Enter: Key1="\$1" Key2="\$2" Go to the end of the line, add the following lines, and press Enter: Key3="\$3" Key4="\$4" Repeat the same for the next line. Finally, go back to the top of the line, and add a line and a comma like this: Key5="\$5" , Save the file. Exit Autodesk Autocad. Go back to your folder, and rename it to "inpuntutemp". Now, Autocad should use your own file as the database. The top five lines are used for keys, and the last line is used for the data. The data lines are filled with your own data. The key lines are filled with the following format: Key1="\$1" Key2="\$2" The first number is a key. The second number is the data. The data is used to compare with the user's input. Here is the complete code: [KEY] BEGIN { version = "1.0"; } Key1="\$1" Key2="\$2" Key3="\$3" Key4="\$4" Key5="\$5" , So now, if you add 5 key in this file, these keys would be used to compare with your input.
